

SPEC 2111 / Deep Learning And Neural Networks

Project Proposal Guidance

Submission Deadline: Week-5 (25th February)

Submission: Please send your proposal to Oznur.Alkan@TUDublin.ie, I will let you know once Brightspace is set up. Once it is set up, you can also submit it through Brightspace. Until then, please use email.

Proposal Outline

Include the following in your proposal.

1. Project Title

Provide a clear, specific title that reflects the problem being addressed. You may optionally include the deep learning approach, since specific deep learning methods have not yet been covered, it is also acceptable to refine this later.

Examples

- *Skin Lesion Classification Using Convolutional Neural Networks*
- *Sentiment Analysis of Movie Reviews Using LSTM and Transformers*

2. Problem Statement & Motivation (3–4 sentences)

Briefly explain:

- What problem you are solving
- Why it matters
- Why deep learning is suitable for this task

3. Dataset Description

State:

- Dataset name
- Source (Kaggle, UCI, HuggingFace, academic dataset, etc.)
- Size and type (images, text, time-series, tabular data)

Example: The project will use the IMDb Movie Reviews dataset containing 50,000 labeled text samples for binary sentiment classification.

4. Expected Outcome / Evaluation

Briefly explain:

- What success looks like
- Metrics you will use (accuracy, F1-score, RMSE, etc.)

5. Teaming

- Projects may be completed in teams of two.
- If you form a team, submit a single proposal for the team that includes the names of both team members.
